

Valorant Guide

Accessibility Score: ★☆☆☆☆

Valorant heavily relies on vision, but blind players can turn it into a sound and memory game. Your superpowers will be sound cues, map knowledge, team communication, and strategic positioning.

Map Memorization: Learn the Battleground by Heart

Start Small: Pick one map (e.g., Bind or Split) and focus exclusively on it. Don't jump around maps too much.

Use Map Overviews: Find large, high-quality overhead maps online or on YouTube walkthroughs. Study the layout carefully.

Break the Map into Zones: Divide the map into smaller, named areas (e.g., A site, B site, Mid, Hookah, etc.).

Visualize the Flow: Imagine yourself moving from one zone to another. Practice running through these paths in the practice mode or during games.

Note Key Landmarks: Identify distinct sounds or features associated with each area, like doors, spike sites, or teleporters.

Use Audio Descriptions: If possible, create or find an audio description guide walking you through the map step-by-step.

Choose the Right Agents for Your Playstyle

- Sentinel Agents:
 - Cypher and Killjoy have traps and gadgets that provide intel about enemy movements.
 - Sage offers healing and barriers that can protect you and your team.

Valorant Guide

- Recon Agents:
 - Sova's recon arrows and Skye's trailblazer drone give vision of enemies via sound and utility.
 - Fade can reveal enemy locations through audio cues.
- Entry Fraggers:
 - Neon offers fast movement and aggressive playstyle that can work if you communicate well with your team.

Master Audio Cues: Your Best Ally

- Footsteps: Different agents and weapons produce unique footsteps sounds. Learn to distinguish these.
- Ability Sounds: Every agent's ability has a specific audio cue (e.g., Sova's recon arrow, Cypher's tripwires).
- Spike Sounds: Spike planting, defusing, and ticking are critical sounds to know.
- Environmental Sounds: Listen for doors opening, footsteps on different surfaces, and sounds from map features like teleporters.
- Practice Sound Localization: Use stereo headphones to get a sense of where sounds come from—left, right, near, or far.

Focus on Close-Range Combat and Support Roles

- Avoid long-range duels, which are extremely difficult without vision.
- Use shotguns and SMGs in tight corridors where sound and memory help you react.
- Focus on spike planting/defusing and guarding areas with traps.
- Play supportive roles like healing or intel gathering, contributing to team success
