

Pokemon

Accessibility Score: ★★☆☆☆

Pokémon is about exploration, battles, and building your perfect team. For blind players, success comes from memorizing menus, learning battle sounds, and mapping routes in your head. Your strongest tools are audio cues, consistent navigation patterns, and well-organized party management.

World Awareness — Navigating Towns, Routes, and Gyms

- Anchor Points: Treat Pokémon Centers as your base — most towns revolve around them.
- Route Mapping: Move in straight lines whenever possible and count steps to remember distances between obstacles.
- Sound Cues in the Environment: Listen for distinct background music changes that signal you've entered a new area.
- Looped Movement: Walk in predictable loops to find NPCs, wild grass patches, and key landmarks.
- Obstacle Memory: Once you bump into a wall, ledge, or water, mentally note its position for future runs.

Choosing Your Perfect Pokémon Team

- Start Simple: Focus on a small, balanced team of three to four Pokémon before expanding.
- Distinct Audio Moves: Some moves have unique sound effects — memorize them to track who's attacking.
- Role Variety: Keep a mix of fast attackers, durable defenders, and utility/support Pokémon.
- Favor Consistency: Stick with familiar Pokémon so you can recall their move sets without checking.

Battle Discipline — Winning Through Sound and Strategy

- Menu Memory: Battle menus always follow a set order — memorize the position of Fight, Bag, Pokémon, and Run.
- Move Placement: Keep your most-used moves in the top slots so you can select them quickly.
