

Legends of Runeterra

Accessibility Score: ★★☆☆☆

Legends of Runeterra (LoR) is rich with strategic depth—mana pacing, card roles, round flow, and attack timing. As a blind player, you can build a robust system emphasizing audio cues, phased routines, and mental mapping to gain control of your duels with precision.

Audio Setup – Let Sound Guide You

- Headphones Are Essential – LoR provides immersive sound effects for plays, triggers, and round transitions. Use stereo gear to discern source direction and card types more easily.
- Dial Back the Background Music – Ensure you clearly hear says like unit summons, spell casts, champion abilities, and Nexus hits.
- Phase Pronunciation – Verbally or mentally label each phase (Draw, Attack, End-turn) as they happen to reinforce the game rhythm and avoid missing steps.

The Round Rhythm – Attack Token and Turn Flow

- Attack Token Rotation – Turns alternate between sections where you attack and defend. Remember whose turn it is by saying “I attack” or “I defend” at the start of each round.
- LoR gives you one new mana crystal per round, with up to 3 “spell mana” carried over. Track totals out loud before plays: “Four mana, two spell.”
- Action Speed Awareness – Cards come in speeds: Slow, Fast, Burst, and Focus. Learn to differentiate them by context and cues rather than visuals.

Deck Roles – Think Functionally, Not Visually

- Units – Attackers, blockers, or tempo maintainers.
- Spells – Removal, buffs, draws, or board control.
- Landmarks – Countdown-based cards that trigger later.
- Champions – Your core playmakers; track their levels and triggers by sound.
- Group your deck mentally by these roles to streamline decisions without needing card names.

Legends of Runeterra

Combat and Trigger Clarity through Sound

- Attack Pattern Recall – Summon sequences, blockers playing, and triggers all have audio patterns. Learn them.
- Champion Levels – Listen for unique champion upgrade jingles and announcers when they level up.
- Landmark Countdown – Each activation may have a distinct sound—associate it with the position and round you'd play it in.

Strategies You Can Hold in Mind

- Tempo Push – Deploy units and control spells to stay aggressive. Use audio-first: “Board clear spell next.”
- Champion-Centric – Build around your champion’s power spike. Listen for level-up cues to push or protect them.
- ControlStack – Hold removal and burst spells to counter key enemy threats at the right moment.
- Landmark Countdown Plays – Time your landmark placements so their effects align with late-round impact.

Accessibility-Friendly Deck Building

- Clear Lane Overlays – Favor decks that don't rely on visual mana shortcuts or complex symmetries.
- Repeatable Effects – Cards that trigger every round or regularly offer audio feedback make tracking easier.
- Paced Playstyles – Avoid overly bursty or intricate combos; slower, deliberate strategies help keep track.
- Sound-Forward Cards – Choose cards with distinctive, easily identifiable audio effects.
